

NAME

CURLOPT_MAXREDIRS – maximum number of redirects allowed

SYNOPSIS

```
#include <curl/curl.h>
```

```
CURLcode curl_easy_setopt(CURL *handle, CURLOPT_MAXREDIRS, long amount);
```

DESCRIPTION

Pass a long. The set number will be the redirection limit *amount*. If that many redirections have been followed, the next redirect will cause an error (*CURLE_TOO_MANY_REDIRECTS*). This option only makes sense if the *CURLOPT_FOLLOWLOCATION(3)* is used at the same time.

Setting the limit to 0 will make libcurl refuse any redirect.

Set it to -1 for an infinite number of redirects.

DEFAULT

-1, unlimited

PROTOCOLS

HTTP

EXAMPLE

TODO

AVAILABILITY

Along with HTTP

RETURN VALUE

Returns CURLE_OK if HTTP is supported, and CURLE_UNKNOWN_OPTION if not.
