1 Introduction

This file implements adaptations to the `mathtools` package needed for the tagging project.

2 The Implementation

¹ `\@@=math`

² `*kernel`

2.1 File declaration

³ `\ProvidesFile{latex-lab-mathtools.ltx}`

⁴ `[2024-07-13 v0.1a mathtools adaptations]`

2.2 Tagpdf support

To make the code independent from tagging being loaded and active we load the `tagpdf-base` package:

⁵ `\RequirePackage{tagpdf-base}`

*

2.3 \shortintertext

Similar to the `\intertext` command from `amsmath`, `\shortintertext` errors with active tagging as it is processed twice which leads to duplicated structures. The fix is similar but is complicated as `mathtools` defines two version (and an additional `\intertext` version) and package options to switch between the variants.

At first we redefine all the internal commands
